Haven Automation Limited

Haven appointed exclusive UK and Ireland distributors for a new range of calibrators

DON'T MISS OUR AMERICAN PIE!

A new range of hand-held calibrators for the process industry has arrived in the UK and is available from **Haven Automation**, who has been appointed exclusive UK and Ireland distributor. New US manufacturers, **Practical Instrument Electronics**, more commonly

known as **PIE**, is made up of a world class team, headed by the former Director of Engineering of **Altek**. The new team are using their extensive experience in the market to launch one new product after another which, when complete, will comprise a very exciting range of

instruments. The range already includes instruments covering RTD, T/C and milliamp measurements.

PIE have selected **Haven** as their exclusive UK and Ireland distributors in recognition of **Haven's** experience in the field and its fully UKAS approved laboratory facilities.

Haven's Flagship Multi-Function Process Calibrator Substantially Upgraded

Already probably the most accurate process calibrator on the market, the new **Spec-Cal® Eclipse II** incorporates new circuitry, considerably reducing the build cost and making it now probably the most cost effective as well.

Features of the new Spec-Cal® Eclipse II include:

- Increased memory for storage of calibration results
- Increased tactile feedback
- More user friendly fascia
- New colour coded terminals
- Supplied with its own UKAS accredited calibration certificate
- Optional plug-in pressure module 0 - 50psi or 0 - 500psi
- Automatic cold junction compensation
- Ability to handle pulsed RTD signals by means of intelligent resistance emulation

Corporate Restructuring

Haven Automation has recently undergone a corporate restructuring, allowing more resources to be channelled into the Instrument side of the business. Since its formation in 1965, **Haven Automation** has consisted of two separate divisions - Instruments and

Marine Engine Simulation Systems. Now that the Marine Division has been sold to **Ship Analytics**, a US company, the Instrument Division will be consolidated and expanded. This newsletter gives an insight into some of the new projects already underway.

SPECIAL INTRODUCTORY OFFER

FREE UKAS CERTIFICATION

with first 100 PIE instruments sold during the launch period

Haven's Laboratory Fitted with New Automated System

Haven has recently commissioned a fully automated pressure calibration facility at its Head Office Laboratory. The Tradinco 'Autocal' System allows for fully automated calibration of a wide range of pressure instrumentation from 'before' readings through to automatic generation of UKAS accredited calibration certificates. Through put time has been greatly reduced, allowing the turn around of calibrations to be within five working days.

Haven Receives Investors In People Award

INVESTOR IN PEOPLE

Haven Automation has been recognised as an **Investor In People** organisation after achieving the Standard on 4th June 2003. **Haven** embraces a commitment to training and development and looks forward to the bottom-line benefits that improved people performance delivers.

"We are fully committed to developing workforce skills in order to achieve our wider business aims and objectives in the Instrumentation sector. We have used the Investors In People planning process to address our needs and have now implemented a training and development programme. We will consistently evaluate this to ensure our workforce has the most up-to-date skills in order that we can build on our success" commented Eric Jones, Managing Director.

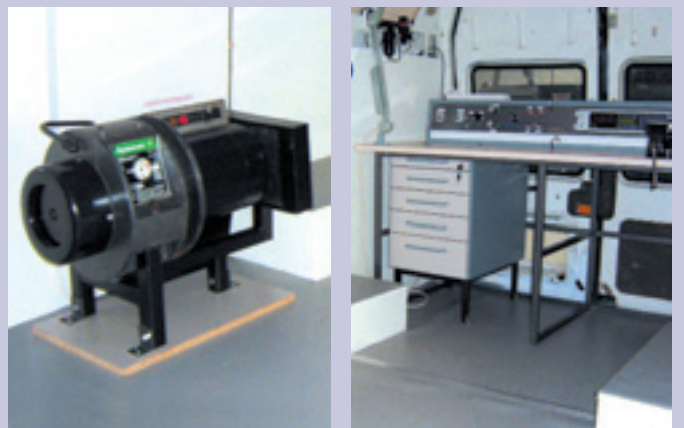

For further information on any **Haven** product and a **FREE** product catalogue in CD format, please contact Louise Rees or Kate Jones in **Haven's** Sales Team.

Mobile Calibration Facility Soon To Be Available

NEW!

Haven technicians have been busy over the past few weeks, fitting out a large panel van with all the necessary equipment to provide an 'on-site' calibration facility to customers. As well as being used by **Haven** engineers and technicians to provide calibration services at a customer's premises, the van will also be available for hire during shutdowns and new plant commissioning projects. Complete with its own oil-free instrument air supply, the van will be equipped with a variety of calibration instruments and standards, all calibrated by **Haven's** own UKAS accredited laboratories. Louise Rees, Sales Administration Manager, explained *"Different projects require a different mix of calibration facilities and we can equip the van to specifically meet actual site requirements."*

The customer can request that the van be fitted with pressure, temperature and/or electrical calibration equipment to suit their own individual requirements.
